

INPROCESS BALLOON TESTER 801

This test device is primarily used for in-process testing of balloons. After the balloon forming process, the balloon is connected to the test unit on one side and closed with a clamp on the opposite side. By applying pressure, the balloon can be visually inspected and measured. The balloon tester is often used in combination with the test device 1200 polarization optics.

Test Unit

Pressure Regulator

Foot Switch

Technical Specifications

- pneumatically actuated tube connector with clamping rings 0.5 – 2.5 mm
- pressure controller: 1 to 8 bar (14 – 116 psi)
- control accuracy: ± 0.5 bar (± 7 psi)
- pressure display
- foot switch pressure on/off
- dimensions: 100 x 100 mm
- weight: 0.7 kg
